DEDICATION

To Theresa: For questioning and challenging me to be socially just in all aspects of my life.

—*Jen*

To Aiden: Keep fighting for what you believe; you will make a difference.

—*Sue*

To Beatrix: Keep asking “but why?”

—*Joanne*

To all those doing social justice work who have paved the way and for those of you who are about to take part in the journey.

INTRODUCTION

Physical Education Is a Social Justice Issue

Jennifer L. Walton-Fisette

We strongly believe that physical education is a social justice issue. This has been supported and argued by scholars in physical education, such as Bain (1975, 1990), Dodds (1985), Kirk (1986), Evans (1993), Fernandez-Balboa (1993, 1997) and Tinning (2002). More recently, Robinson and Randall (2016) compiled a theoretically-rich book that centered on social justice issues in physical education; Azzarito and colleagues (2017) called attention to revitalizing the social justice agenda—an agenda that may have remained hidden, dormant or ignored for decades, and a special issue in the journal of *Physical Education and Sport Pedagogy* (Walton-Fisette & Sutherland, 2018) focused on social justice issues in Physical Education Teacher Education. Consistent across all of this scholarship, was the consideration of the historical, political and social contexts, along with the social identities and lived experiences of future physical education teachers and primary and secondary students. Furthermore, the dominant message was that we, physical educators, must explicitly address and educate our students about and for social justice, at the primary, secondary and higher education levels.

The realities accompanied by the shifting demographic landscape in schools throughout our global society, lead to numerous questions that the physical education community may need to consider as we attempt to teach for and about social

justice: How are we, physical educators, addressing these changing demographics in our society? How do these demographic changes inform our curriculum, instruction and assessment practices? The standards and grade-level outcomes that we employ? Policies that are being enacted at the national, province and/or state level? What steps are we taking to make our programs more socially just and to educate our students about social identities, social inequalities and social justice? We do not have the answers to all of these questions; however, the purpose of this book is an attempt to respond to the last question—to provide Physical Education Teacher Educators (PETEs) and primary and secondary physical education (PE) teachers with content knowledge and pedagogical practices that specifically address social justice issues in a physical education setting.

BOOK ORGANIZATION

The purpose of this book is to provide PETEs and PE teachers with tangible lessons and activities that can be implemented into your classes. The chapters are connected to research and sometimes theory; however, practical application of social justice content is emphasized in each of the chapters. The book is divided into three parts:

- Part I—Knowledge Construction of Social Justice Issues
- Part II—Social Justice Issues: Strategies and Lessons in Physical Education
- Part III—Curriculum Development: What are the Possibilities?

Before describing each of these sections, it is important to inform you that the use of the English language is not consistent across the chapters. We believe it is important to retain the author(s) usage of the English language in their country of origin. Furthermore, the chapters are short in nature with the hope to guide you with the most salient content and methods needed to employ these activities and lessons. Another point to note, is that these chapters do not address all social justice issues, nor do the chapters in Part II provide an exhaustive list of strategies and lessons on the identified social issue. Our hope is that we have provided a valuable resource to PETEs and PE teachers on how to begin or continue your work on teaching about and for social justice.

Part I—Knowledge Construction of Social Justice Issues is comprised of two chapters, which focus on transformative pedagogy and action research. Transformative pedagogy frames the pedagogical practices that are emphasized in the strategies and lessons chapters in Part II. The action research chapter provides a process that will allow us, teachers, to explore our own beliefs, experiences and current teaching practices as we consider engaging in different or new pedagogies in our attempt to address social justice issues.

Part II—Social Justice Issues: Strategies and Lessons in Physical Education comprises the majority of the chapters in this book. The social justice issues ad-

dressed in this chapter are: Self-identity, Body, (Dis)ability, English Language Learners (ELL), Gender, Indigenous, Race, Religion, Sexual Identity, Social Class and Bullying. There are two chapters included for each social issue (except for bullying and indigenous); one chapter is specific to PETE and the other focuses on primary/secondary PE. It is in this section that we cannot and did not provide all of the possibilities that could be explored, taught and addressed at each level for each social issue. We acknowledge that collectively, it may provide a limiting perspective on each of the issues, but we believe we will have the opportunity to build upon and expand on the valuable chapters that are included in this book. Unlike Parts I and III, a template was utilized in the development of these chapters to offer some consistency. The sections include:

- Action Research and Reflection
- Context
- Unit/Lesson Set Up
- Strategy/Activity/Lesson
- Intersectionalities (if applicable)
- Challenges and Possibilities
- References/Resources

When engaging in social justice work, it is important to participate in reflective practice and to consider the context in which the experience—in this instance, teaching lesson, occurs. Both the action research and reflection and context sections relate to Chapter 2. Often times, when attending a conference or obtaining a lesson idea from the internet or textbook, we are left to figure out how the lesson is set up or designed before implementation can occur. We know that planning and preparing are both critical in the execution and outcome of a lesson. The strategy/activity/lesson is the central component of each of the chapters in this section. Figures and appendices are included to provide additional content and resources. Quite often, social justice issues are not addressed in isolation, rather, they often intersect with other social justice issues (e.g., gender and sexuality). We have asked authors to include how the specified social issue may intersect with other social justice issues if applicable. We acknowledge that educating others about social justice issues can be challenging, uncomfortable or expose more questions than answers. That is why we asked the authors to include the challenges that they have encountered and those that you may experience, as well as the possibilities that may result from teaching this particular social justice lesson. The chapters conclude with a list of references and resources.

Part III—Curriculum Development: What are the Possibilities? focuses on how we may address social justice issues across the curriculum, beyond the individual lesson plan. The first chapter provides an overview of considerations and possibilities. The last two chapters emphasize a particular curriculum model that can and has been implemented to teach about social issues. The authors explore the process of how this can be done.

Collectively, we hope that this book is a valuable resource for you as you teach for social justice in physical education. We acknowledge and understand that you may only be interested in certain chapters, because they align with your beliefs, experiences, standards or curriculum. Each chapter has been written to stand on its own even though we attempted to have consistency across the chapters in Part II. Throughout this process, we have learned from the chapter authors and hope you enhance your knowledge and pedagogical practices as well. We also hope that we continue to engage in social justice work and intentionally seek to educate our students about and for social justice.

PART I

KNOWLEDGE CONSTRUCTION OF SOCIAL JUSTICE ISSUES

CHAPTER 1

FIVE PRINCIPLES OF TRANSFORMATIVE PEDAGOGIES IN PETE

Rod Philpot and Alan Ovens

Enacting a transformative pedagogy in physical education teacher education (PETE) requires teacher educators to simultaneously and flexibly juggle institutional policies, professional accreditation standards, program expectations, resource limitations and student receptivity. Theoretically, it involves accommodating the relational, distributive and participative aspects of social justice in respect to advocacy for equitable distribution of access to educational services and to outcomes, recognizing social and cultural difference, acknowledging and valuing the diversity of students we teach (Cochran-Smith, 2009). Transformative pedagogy should enable students to actively participate in decision making as a form of embodied action (North, 2008). Enacting a transformative pedagogy is by no means an easy task.

In this chapter we propose five principles that may help teacher educators manage this complexity and guide them with their own efforts towards enacting a transformative pedagogy. We propose that transformative pedagogies require embodied awareness, a focus on diversity, the enactment of democratic principles including student voice, active questioning of your own practice, and a critique of the mechanisms of oppression. Although individual teaching practices may

Teaching About Social Justice Issues in Physical Education, pages 3–11.

align more strongly with individual principles, we stress that the ability to enact a transformative pedagogy lies in the consideration of, and complex multi-layered relationship (Ovens, 2017a) between all principles. In the following discussion we firstly examine the concept of transformative pedagogies before outlining the five principles that underpin this concept.

TRANSFORMATIVE PEDAGOGY

Ukpokodu (2009) suggests that transformative learning occurs when a person develops an awareness of their habits of mind, develops new viewpoints and perspectives, and comes to see some aspect of the world in a different way. The process of transformational learning relies on pedagogies that move away from knowledge transmission and toward communicative learning where a learner searches for meaning through reflecting on values, social norms, and assumptions through which a truth claim is made (Mezirow, 2009). Mezirow calls for transformative learning opportunities (pedagogies) that challenge taken-for-granted frames of reference and open these frames for possible change.

When we apply this to the context of PETE, transformative pedagogies enact teaching approaches that enable PETE students to examine the educational, moral, and political influences that guide their work as professional teachers, encourage reflective thinking, and foster dispositions for social justice (Ukpokodu, 2009). Transformative pedagogy must cater for both personal and social change (Tinning, 2019). While personal change does not guarantee social change, it is difficult to envision any social change in PE without personal change in teachers.

It is important here to stress that transformative pedagogies are not generic and enacted by using some pre-set strategies. Referring specifically to the context of PE/PETE, Tinning (2017) described transformative pedagogy as an “educational perspective” that concerns itself with questions of justice, democracy and ethics (Tinning, 2017). The important point here is Tinning’s use of the word ‘perspective’. Rather than a teaching strategy, a perspective is a particular attitude that guides professional decision making and actions. In other words, the practice of transformative pedagogy embodies and is guided by principles designed to promote equity and social justice rather than enact some teaching strategies that have proven successful in some educational context. There is no single transformative pedagogy or model waiting to be discovered (Walton-Fisette, et al, 2018).

In the following section we outline a small but powerful set of principles that can guide teacher educators through the complexity of their individual contexts. Transformative practices will always be woven around the context of the practice, the learners and the breadth and scope of a PETE program (Ovens, 2017a, Philpot, 2016). While implementing these principles requires a commitment in time and effort, they also cannot be reduced to a teaching method that is learned through transmission and then enacted with no consideration of the teacher, learner, and context (Friere, 1970; Ovens, 2017b). Rather, the principles help teacher educa-

tors to be adaptive and willing to challenge the status quo in the quest to find those novel and innovative solutions that are effective in their own settings.

PRINCIPLE 1: PROVOKE UNDERSTANDING THROUGH AN EMBODIED AWARENESS

This principle is based on the fundamental point that we are bodies and that we experience the world through an embodied consciousness. Experiences of discrimination, oppression and social injustice are not only evidenced by visible divisions of resources or opportunities, but are embodied by the individual as emotions, memories, feelings and bodily restrictions. In fact, our bodies are deeply implicated in all aspects of human experience since they are the means for making sense of and making connections with a world in which they co-participate in creating (Macintyre, Latta, & Buck, 2008). The implication is that teachers need to be sensitive to the corporeal and sensual nature of how people know and learn, so they can actively provide meaningful, real and profound learning experiences that shape the embodied learner in an ethical way.

Provoking an embodied awareness involves learning activities that provide sensual experiences. In other words, it is how the learner *feels* the experience that is crucial. Transformative teaching should enable each student to feel empowered, feel emancipated, feel heard, feel respected, feel expressive, and feel creative (Ovens & Powell, 2011). It is through sensual experiences that learners feel attached and connected—to friends, to community, to teachers, to learning, to body and to self. It is also through such experiences that the desire to act, to advocate, and to seek justice is created. However, it is not only important how this is achieved, but also vital to reflect on how current practice may create the opposite feelings of being disempowered, restricted, controlled and disembodied. Included in this is becoming conscious of how our desires and need to consume are commercialized, manipulated and normalized.

Provoking an embodied awareness is enhanced through an immersion with, and meaningful connection to an authentic situation, problem or experience. We suggest teachers must be more deliberate in creating teachable moments and activities that evoke feelings, rather than them being a ‘lucky’, unplanned by-product or teachable moment. We include in this the need for critical reflection and discussion on the aesthetic, pleasurable ‘bodily’ experiences, suggested by the likes of Booth (2009), Pringle (2010) and Ross (2008). Overall, we believe that an embodied awareness emerges through meaningful, authentic, relevant and embodied teaching and learning activities and teaching contexts.

PRINCIPLE 2: RECOGNIZE AND WORK WITH DIVERSITY

This principle is based on the belief that awareness of the diversity in communities is critical to fostering social justice. As a concept, diversity rejects the notion of a ‘normal’ group and ‘others’ and instead constitutes diversity and difference

as central to the mixture of students in each lesson. Recognizing diversity extends beyond awareness to valuing diversity as a key pedagogical resource. Working with diversity includes introspectively recognizing that one's own values and beliefs define how we frame our world and the possible implications of acting on these perspectives. A lack of understanding of diversity is a barrier to teaching for social justice (Walton-Fisette et al, 2018) and PETE students need to understand diversity before they embark on developing the agency to address injustice (Ukpoduku, 2016).

Diversity encompasses many characteristics including ethnicity, socio-economic background, home language, gender, sexuality, special needs, disability, and giftedness. Teaching needs to be responsive to diversity within ethnic groups, for example, diversity within first nation's people and immigrant populations. Evidence shows teaching that is responsive to student diversity can have very positive impacts on low and high achievers at the same time. By seeing and respecting the similarities and differences among persons and cultures, the teacher can use diversity to enhance the learning within the lesson. Acknowledging other cultures and worldviews and recognizing that factors such as race, class, and culture frame how people interpret, understand, and explain others' words and actions can transform silences into productive discussions.

Social justice issues of diversity related to physical education featured in literature highlight issues of body shape (Tinning, 1985), disability (Fitzgerald, 2012), gendered bodies (Gerdin, 2016), discrimination based on sexuality (Sykes, 2011) and obesity (Burrows, 2016). Recent literature further examines how the intersectionality (see chapters in Section II) of these identities serves to privilege and oppress groups in society. The transformative pedagogical work that examines diversity such as examinations of media photographs to develop an awareness of and to challenge to dominant portrayals of gender and race (Oliver, 2001; Oliver & Kirk, 2017) and ethnicity (Legge, 2010) are explicit attempts to disrupt frames of reference and enable students to notice and name concepts they are unfamiliar with. To build on this, inclusion of diversity can come through greater inclusion of cultural activities and games (e.g., Indigenous games) and disability games (e.g., boccia, goalball), and greater critique of dominant forms of PE in schools. In addition to recognizing diversity and how it may oppress students, further work is required to provide PETE students with the pedagogical skills to address injustice.

PRINCIPLE 3: INVOLVE STUDENTS AS CO-CONTRIBUTORS TO COURSE DESIGN

This principle is based on two key notions. The first is that transformative pedagogy should employ practices that interrupt and call into question the logic underpinning existing or prevailing ways of thinking, seeing and saying. Involving students in course design in PETE disrupts the logic that they do not have a right and a responsibility for their own learning. It also respects that students should get some say given they are the recipients/users/direct beneficiaries of the course they

are enrolled in. The second notion is the deliberate repositioning of the student as a subject of pedagogy. Rather than being passive consumers of course content, students are expected to harness their own capacities and engage their potentiality for developing professional skills, broadening their perspectives on teaching, considering the rationales underlying pedagogy, and assess their own developing perspectives toward teaching. By requiring students to co-contribute to course design, the students are involved in the educational process of producing a course that is meaningful, inclusive, challenging and professionally worthwhile.

This principle leads to four implications for PETE pedagogy. Firstly, it means that emancipation is the starting point and not the outcome of the course pedagogy. PETE students begin as equal participants in the pedagogical process and share the responsibility for the production of the course. Secondly, it sets up the possibility for novelty and creativity to frame course content and activities. New roles and new responsibilities allow new ways of knowing and being to emerge. Thirdly, this principle challenges the intentionality inherent in pedagogy as a vehicle for incorporating stock knowledge and particular values about teaching. Fourthly, it makes transparent the decision making central to the power and production of a course. Students can be invited to contribute to decisions such as what assignment tasks will be undertaken, how will achievement be assessed, when will work be due, and how will final grades be determined.

PRINCIPLE 4: QUESTION YOUR OWN PRACTICE

This principle is based on the notion that we (PETEs) should pay more attention to how the instructional practices and structures we use embody social justice theory. PETEs must concurrently teach about and enact social justice and social theory. The distinction between ‘teaching about’ and ‘enacting’ is subtle, but important. When the pedagogy in a course has a singular focus on teaching about social justice, the core ideas and concepts become knowledge to be learnt or absorbed by student teachers and applied in school contexts. In other words, we often see teacher educators teaching about social justice in ways where the concept becomes reduced to theory taught through a transmission pedagogy and the teaching is either telling (the lecture), modelling (the demonstration lesson or microteaching), or apprenticeship (the practicum) (Ovens, 2013). In contrast, we suggest that theory should be put into practice so that the focus shifts to examining how the core ideas and concepts central to social justice become enacted within and lived through the instructional practices and structures of the course. PETEs should consider the coherence between their advocacy for social justice pedagogies and their own pedagogical practices.

The central point of this principle is that while PETE students may be encouraged to ask critical questions *in* their teacher education courses, they are often not encouraged to ask the same question *of* their teacher education courses (Segall, 2002). A common example is the way teacher educators highlight the importance of questioning how teachers meet the individual needs of their students, but rarely

do they turn this critique on themselves and ask how their own teacher education lessons meet the individual needs of their student teachers. If theory is not reflexively applied to understanding one's lived practice, the pedagogy involved becomes an exercise in separating theory from practice, while effectively disguising the process of doing so (Segall, 2002). By teaching a detached theory of social justice, power, oppression, and privilege, students are anesthetized from challenging their own education and the methods used to ensure that theory is disconnected from everyday practice because it becomes content to be learnt rather than lived (Segall, 2002).

PRINCIPLE 5: ADDRESS THE MECHANISMS AND CONSEQUENCES OF OPPRESSION.

This principle is based on the need to understand those attitudes and behaviors (e.g., racism, sexism, ageism, heterosexism) that perpetuate oppression and acknowledge the real social and economic disadvantages that oppressed people face in society. When discussing social justice in lessons or staff meetings, it is important to dismantle structures that sustain oppression and not simply focus on the psychological harm of oppression. This requires a careful examination of systems of power in conjunction with an emphasis on social change and student agency both inside and outside of the classrooms (Hackman, 2005)

The context of PE offers many examples such as oppressive language and images about body size, shape and health; oppressive teaching practices that favor able bodies or create gendered classrooms; and oppressive facilities that privilege sport over other forms of movement. A transformative pedagogy has the dual aim of drawing attention to some of these taken for granted structures (consciousness raising) and educating to enable prospective PE teachers to challenge these structures (taking action). A transformative pedagogy in PETE can illuminate examples of how PE teachers have recognized oppressive structures and worked to facilitate changes in their schools. This can be seen in the attempts of physical education to change discourses around healthism, 'healthy' bodies, the position of sport in PE or sport-as-PE, and gender.

In countries such as Australia and New Zealand where PE curricula have been replaced by a new curriculum area called Health and Physical Education (HPE), new possibilities for transformative practice emerge as the field of HPE is less bound by history and is unencumbered with sedimented teaching practices (McIntyre, Philpot, & Smith, 2016). At a policy level, HPE introduces new ways to orientate school practice (Bowes & Ovens, 2014) and endorses examinations of how bodies are socially constructed and oppressed or privileged (Tinning, 2012). The transformative potential of this curriculum is catalyzed (or not) upon enactment in both (H)PETE and school HPE, where the dispositions and practices of individual teacher educators and teachers intersect with curricula to endorse or challenge the mechanisms of oppression relevant to PE.

PRACTICING THE PRINCIPLES

More than 15 years ago, Gard and Wright (2001) suggested that rather than transforming society, PE was deeply implicated in the reproduction of society. More recently Tinning (in press) cautions that PE educators are more likely to get swept up in the wake of social change rather than creating the social change.

Transformative pedagogies are not workshops or one-off activities whereby initial teacher education programs can ‘tick off’ that they have addressed cultural, gender or religious differences. The transformative potential of transformative pedagogy is exponentially more powerful when a social justice perspective is infused as a normal taken-for-granted practice through a PETE program, across many courses and educators (Nieto, 2000) and ultimately within schools’ PE programs (Philpot, 2017). Real empowerment of PE teachers that can lead to the transformation of the subject area paradoxically requires the field of school PE to be disrupted sufficiently to be ready for change. The work of transformative pedagogues plants seeds for change that may require many years to germinate (Gerdin, Philpot, & Smith, 2018). Transformative teaching should be conceptualized as a process that strives for greater democracy and social justice rather than an outcome. Given the broader social forces in the world beyond education, a truly equal and democratic world is more aspirational than probable.

We are cognizant that this chapter is largely descriptive of the broader principles of transformative pedagogy and, as such, fails to provide pragmatic teaching strategies. In our own roles as physical education teacher educators we are acutely aware of structural constraints around enacting these principles, yet we reflexively recognize that, in many instances, we choose to constrain ourselves and fail to exercise the agency we have when we work with PETE students. Ultimately, we hope that these principles provide a framework through which the examples of practices that follow can be read and critiqued.

CHAPTER 2

TAKING ACTION FOR CHANGE

(Participatory) Action Research and Social Justice Education

Joanne Hill

Only action research which aspires to be emancipatory warrants the term action research.

—*Tinning (1992, p. 205)*

Action research (AR) is a methodology for inquiring into and making change in one's own practice. It has a cyclical and structured process involving reflection, planning, action and observation, that has the possibility of producing sustainable reflection and change in an educator's practice (Kemmis & Wilkinson, 1998). All education is about change, but especially for social justice education (SJE) as 'the hope is it transforms or broadens attitudes, beliefs, and behaviours' (Goodman, 2011, p. 32). Action research provides the tools for educators to create opportunities to take action against oppression and marginalization, a key element of SJE. Action Research has been written about frequently in physical education (PE) and education more broadly; this chapter's purpose is not to outline what AR is or can do in itself, but to consider connections between teaching for/about social justice (SJ) and changing practice through research. I first explore how reflection on practice is valuable in SJE, then address how AR and social justice align, and

Teaching About Social Justice Issues in Physical Education, pages 13–20.

conclude with ways that AR can be instigated for SJE and in using the strategies in this book.

SOCIAL JUSTICE EDUCATION AND REFLECTIVE PRACTICE

SJE and critical pedagogy have been conceptually aligned with the ideas of critical theory, and with democracy, emancipation, and uncovering or taking action against oppression (Hill et al., 2018; Rivzi, 1998). Bell, Goodman and Varghese (2016) have argued that self-knowledge and critical exploration of identity by educators is necessary for SJE. We should reflect on our positions in systems or institutions of inequality in order to fully develop SJE in our teaching. Teaching—from early years to higher education contexts—is a reflective profession. However, not all reflection is critical. Brookfield (2017, p. 9) distinguishes between technical and critical reflection. Technical reflection involves such decisions as a policy on handheld devices in the classroom or setting assessment deadline dates, but ‘these technical decisions become critical when we start to see them in their social or political context’. Decisions with a social justice implication are embedded all throughout a department, not just in the curriculum (Cochran-Smith, et al., 1999). This concerns the power dynamics in education. We are expected to conform—and have our students conform—to norms of behaviour (for instance, students will sit quietly and listen). This, Brookfield (2017) points out, is a dominant ideology in education, one that we can critically reflect upon. Critical reflection is focused on illuminating power: understanding ‘how educational processes and interactions are framed by wider structures of power and dominant ideology’; and uncovering hegemony: finding out ‘assumptions and practices that seem to make their teaching lives easier, but that actually end up working against their own best interests’—that is, exploitation (Brookfield, 2017, p. 9). We are often constrained by official curriculum and timetabling decisions that happen without our input; have little control over the classroom space we are given; struggle to follow our own interests in our courses, let alone give our students a say in what they study.

To fully align with the principles of SJE, ‘the improvement of practice should be linked to an understanding of the material and ideological conditions, which constrain practice and the way it is informed’ (Tinning, 1992, p. 206). Although not all key texts on SJE (Bell et al., 2016; Goodman, 2011) mention AR, the emphasis in SJE literature on reflection and context-driven change suits the framework of AR. Reflective processes for educators through other means (aside from AR) have been or are encouraged by those researching SJE. For instance, narrative and self-study are promoted as powerful ways for educators to uncover assumptions and biases, and to open up dialogue (Ovens & Fletcher, 2014). Self-study is an opportunity to question your practice, ideas and actions in your pedagogy and curriculum. Social justice demands more of educators, and self-study is no different; Ovens and Fletcher’s (2014, p. 7) encouragement ‘to be more, to improve, to better understand’, although written about self-study, would also apply to SJE.

ALIGNING ACTION RESEARCH AND SOCIAL JUSTICE

Kemmis and Wilkinson (1998, p. 21) express AR as ‘a spiral of self-reflective cycles of:

- Planning a change
- Acting and observing the process and consequences of the change
- Reflecting on these processes and consequences, and then
- Re-planning, and so forth’

AR is carried out, not by outsider researchers, but by practitioners themselves. As a research methodology, it encourages teachers and other practitioners to pose and solve problems about their own practice (Tinning, 1992). AR implies learning for ourselves and leading social transformation—key goals of SJE—and therefore can provide educators with a way of doing social justice (Bristol & Ponte, 2013; Greenwood & Levin, 1998).

Advocates of AR also encourage teachers/researchers to keep control (not relinquish it to an ‘expert’ outsider researcher). However, sometimes it is useful for outsiders to help, because it can be difficult for teachers to adopt a critical stance on their work and practice—if they believe they are already equitable, ‘what fresh evidence might cause them to question this belief?’ (Brooker et al., 1998, p. 191), or they will find evidence that supports what they already believe. So, collaboration with outsiders can also help the reflection and observation processes. For instance, Petrie, Devcich, and Fitzgerald (2018) outline how a teacher created reflective journals, which were then shared with two co-researchers outside his school to prompt discussion about his practice. Personal experience is privileged in action research, and as Bristol and Ponte reflect, can make social justice a challenge if teacher/researchers may stop being critical of their own experience. Perhaps ‘we need an external dissenting voice’ in order to fully focus on what we can do better, and not how we can get other people to do better (Bristol & Ponte, 2013, p. 521). Similarly, social justice and AR remind us to avoid making assumptions about the problems that learners have, as this perspective ‘works to disadvantage further those who start off at a disadvantage’ (Lumby & Coleman, 2016, p. 183). That external dissenting voice could come from students themselves. Our culture supports authority and simple thinking; students are not used to thinking that they can create knowledge or their own sense of truth (Brookfield, 2017). If AR is done *with* students or other stakeholders, not *for* them, and collaborative problem analysis is centered, we might get closer to questioning authority (Greenwood & Levin, 2007).

Participatory action research (PAR) is a specific AR methodology that may align particularly well with social justice. PAR is useful for two reasons: listening to other voices, and helping students manage the emotional reactions they might have if they are new to dealing with SJE and knowledge of oppression (Goodman, 2011), because it includes them in the enquiry, decision making and reflection.

PAR is a specific form of action research that focuses on collaborative elements, to engage young people in their own inquiry, reflection and action, and harness this inquiry to ‘speaking back and challenging conditions of injustice’ (Cammarota & Fine, 2008, p. 3). Frameworks such as this in educational or youth settings promote using research ‘for resistance’ and hence PAR with youth ‘represents not only a formal pedagogy of resistance, but also the means by which young people engage in transformational resistance’ (Cammarota & Fine, 2008, p. 4).

The typical action research cycle of plan-act-observe-reflect is taken up by PAR practitioners, but they go further to emphasize:

- The social process (a collective and individual undertaking)
- Participatory examination (done on oneself or one’s group, not on others)
- Collaboration (working together)
- Emancipation (freeing ourselves from unjust structures limiting development)
- Criticality (to contest unproductive and unjust processes)
- Reflection (cycles of action)

—(from Kemmis & Wilkinson, 1998)

Each of these elements can help practitioners to enhance knowledge of practice. Many of these elements explicitly mention social justice or aspects of change to structures and practice that recall SJE tenets. So practitioners of PAR are doing social justice, and learning how to better teach *for* social justice, in the process of learning to better teach *about* social justice. ‘For’ and ‘about’ are inseparable to some degree.

DEVELOPING AN ACTION RESEARCH CYCLE FOR SOCIAL JUSTICE CHANGE

So how does an educator start AR in order to teach for/about SJ? How does (s)he start that process? Before you start, you might ask questions about the context and the learners you are addressing. Sellars (2017, drawing from Gore and Zeichner, 1991) suggests ways to reflect on political and social issues in schooling, which could draw out some useful places to start:

- What do I believe to be the purpose of education, the philosophy, values, function?
- Who sets the curriculum and does it support the needs of learners from different social and cultural groups?
- How can I minimize disadvantage to particular individuals or groups?
- Have I identified bias or prejudice and moved to diminish these? and
- Have I identified my own assumptions, perceptions and values?

Educators studying their own practice and their students’ experiences are encouraged to generate their own knowledge of their students’ needs and real

FIGURE 2.1. Prompts for Setting Up (Participatory) Action Research for Social Justice

problems, through participatory work; this insider perspective does not presume authority over others, but involves a critical analysis of power and privilege, including considering who you are doing research for (senior management or the students?); honoring people's values and needs; and challenging dominant views about who can be a researcher and who benefits from research, emphasizing trust and respect for students and their own research skills (Atweh, Christensen, & Dornan, 1998). If (P)AR is about doing research or changing practice with people,

then a way in which educators could use this book is in reflecting on their own context to find ways to adapt or amend the suggestions made here to their own students, engaging those students in understanding their situations, barriers, and strengths, to create critical pedagogies or teaching for/about SJ that works for them. Educators looking to pay (more) attention to social justice should focus on their own students' needs, paying attention to where they are and what their experiences are, and making that a part of the action research cycle. Building in dialogue with colleagues and students; inviting them to take part in decision making and enquiry. In this you can draw from the chapter authors' own reflections of what has worked for them, consider if it would work in your situation, and if so, find ways to implement it. The grid above (Figure 2.1) sets out the four stages of AR and adds Sellars' (2017) initial questions for reflective change of equity, to offer some prompts (drawing from Goodman, 2011; Kemmis & Wilkinson, 1998; Rovegno & Kirk, 1995) concerning the stages of a (participatory) action research project for educators looking to initiate critical enquiry into their own practice and context.

CONCLUSION

The process of education is not imitation, but the creative application of all we know brought into creative dialogue with the historical moment. (Bergmark, Ghaye & Alerby, 2007, p. 463)

AR may enable educators to examine where their practice could become more aligned with social justice, what social justice means in their local context, and subsequently reflect upon creating pedagogies, curricula and environments for change. Both AR and SJE are never completed in the sense of reaching the end of a project. They are journeys of continually listening and contributing to extended conversations. As an educator examining your own practice, from defining what social justice means to yourself, your learners and your context, through to investigating how it is implicated throughout all decisions, curriculum designs, and educational materials (Cochran-Smith et al, 1999), you are on a journey that could frame your practice for the years to come. There is no quick fix for 'adding' social justice to your teaching, as Ovens and Philpot stated in Chapter 3. For genuine social justice, structural and cultural change in education is needed. AR could provide the evidence and reflective practice to succeed.
